

AI in Community Banks and Credit Unions: Scenario Reference

Nine operating scenarios, the risks they create, recommended controls, and the governance sources behind them.

Version	September 2026
Sources current as of	September 2026
Audience	Community bank and credit union leadership
Status	General information; not legal advice

1. Introduction

1.1 Purpose

AI is becoming part of the software your institution uses and the work your staff do. This guide walks through nine decisions that come with it, from approving a writing assistant to explaining a credit decision. Each section describes a situation, the risk to consider, and practical steps your team can take.

1.2 Audience

Chief executives, board members, and risk, compliance, lending, operations, and technology leaders at community banks and credit unions.

1.3 How to use this guide

Start with a tool you're using or considering. Work through the relevant sections with the colleagues responsible for it, using its approval record and latest review. Note any gaps and agree who will follow up. Each scenario includes recommended controls and an example of how they work in practice. Appendix A provides the source links.

1.4 Scope and limitations

This document is general information, not legal advice. Applicability of any rule depends on the institution's charter, regulators, footprint, and activities; confirm obligations with counsel and the institution's regulators. Sources are current as of September 2026. Supervisory guidance is not binding on its own, but examiners use it to assess programs.

1.5 Contents

- 2. When staff bring their own AI tools
- 3. AI in the software you already use
- 4. Getting an AI pilot approved
- 5. Checking a vendor's test results
- 6. Explaining an AI-assisted credit decision
- 7. Helping customers when the chatbot falls short
- 8. Keeping track of AI after launch
- 9. Updating your security plan for AI
- 10. Talking to customers about AI
- A. Appendix A: References
 - About Upstate AI

PART 1: INTRODUCING AI

2. When staff bring their own AI tools

2.1 SITUATION

A colleague finds an AI writing assistant that could help draft customer emails. Before using it at work, they need to know whether your institution allows it and what information they can share.

2.2 RISK

Without clear guidance, staff may put customer information into an unapproved tool or give up on a useful idea. They also need to know who can review the request. This is sometimes referred to as Shadow AI.

2.3 RECOMMENDED CONTROLS

1. Explain which tools staff may use and what information may go into them.
2. Assign an owner to each AI system and agree with the board on the risks your institution will accept.
3. Keep approvals and reviews in one place within the existing risk program.

2.4 WHAT GOOD LOOKS LIKE

Staff can find the approved tools, the rules for using them, and the person to ask for help. Each system has an owner. The board has agreed on acceptable risks and receives regular updates. These records sit within your existing risk program.

2.5 KEY SOURCES

- CSBS AI Supervisory Framework V1.0
- NIST AI Risk Management Framework (AI 100-1) and Generative AI Profile (AI 600-1)
- NYDFS, Cybersecurity Risks Arising from Artificial Intelligence (October 16, 2024): guidance for DFS-regulated entities. [NYDFS](#)
- NCUA, Artificial Intelligence resource page: reference material for credit unions, not a standalone rule. [NCUA](#)

The 2026 interagency model-risk guidance excludes generative AI and agentic AI models. It is not the basis for this section's recommendations on staff use of general-purpose AI tools. Review that use through the institution's applicable information-security, privacy and third-party-risk requirements and internal policies.

Source links are in Appendix A.

PART 1: INTRODUCING AI

3. AI in the software you already use

3.1 SITUATION

An update to your fraud platform or customer-management software adds AI. Your team didn't buy it separately, so it may be missing from the AI inventory. Tools staff adopt on their own can be missed in the same way.

3.2 RISK

A feature can begin handling sensitive data or influencing decisions before anyone reviews it. An incomplete inventory makes those uses harder to spot and assign to an owner.

3.3 RECOMMENDED CONTROLS

1. Ask vendors which AI features are available, which are enabled, and what data they can access.
2. Record vendor features and staff-added tools in the inventory alongside systems the institution built.
3. Prioritize review of uses that affect credit, sensitive customer data, or fair treatment.

3.4 WHAT GOOD LOOKS LIKE

Your inventory includes tools built in-house, AI in vendor software, and tools staff have adopted. Each entry records the use and its risk level. Uses involving consumer credit, nonpublic customer information, or possible discrimination are flagged for closer review.

3.5 KEY SOURCES

- CSBS AI Supervisory Framework V1.0 (Core Examiner Guide, Risk Tiering Worksheet)
- **Model-risk reference, where applicable:** SR 26-2 and OCC Bulletin 2026-13 cover traditional and non-generative AI models. The guidance is expected to be most relevant to banking organizations with more than \$30 billion in total assets and generally does not apply to models at institutions with \$30 billion or less unless they have significant model risk. Generative AI and agentic AI models are expressly outside its scope. [Fed + OCC](#)
- NIST AI 100-1
- NYDFS Industry Letter: Cybersecurity Risks Arising from AI [NYDFS](#)

Pending proposal, not final guidance: Proposed Third-Party Risk Management Guidance (OCC, Federal Reserve, FDIC and NCUA), published September 15, 2026. Comments close November 16, 2026. Existing applicable guidance remains in effect unless and until replaced. This proposal is included for awareness, not as a current requirement or the basis for the controls recommended here.

Source links are in Appendix A.

PART 1: INTRODUCING AI

4. Getting an AI pilot approved

4.1 SITUATION

A team is ready to launch an AI pilot, but compliance is only just hearing about it. Questions about privacy or fair lending send the team back to work. An early review would have helped them plan for those requirements.

4.2 RISK

Late review can delay a useful project or leave important risks unresolved at launch. Without agreed approval criteria, the team may not know what evidence it needs to proceed.

4.3 RECOMMENDED CONTROLS

1. Give staff a contact for proposed AI uses and identify who needs to review each one.
2. Match the legal, fairness, and privacy review to the proposed use.
3. Agree on launch criteria before testing begins. Include fair lending specialists for credit uses and advertising review for customer-facing claims.

4.4 WHAT GOOD LOOKS LIKE

Before testing, the team knows who will review the results and what must be true for launch. The approval record addresses the relevant legal, consumer protection, fairness, and privacy questions. Material changes prompt another review.

4.5 KEY SOURCES

- CSBS AI Supervisory Framework V1.0 (Core Examiner Guide)
- CFPB, Chatbots in Consumer Finance
- FTC v. Rite Aid Corporation; FTC Operation AI Comply
- Treasury, Artificial Intelligence in Financial Services
- NIST AI 100-1 and AI 600-1

Source links are in Appendix A.

PART 2: EVERYDAY USE

5. Checking a vendor's test results

5.1 SITUATION

A vendor shares test results for a model. Those results help, but the tests may use different data or customers from yours. Your team needs evidence that the model suits the work you plan to give it.

5.2 RISK

A model that performs well in the vendor's tests may be less reliable in your setting. Relying on those results alone can leave your team unaware of limitations that matter to customers or staff.

5.3 RECOMMENDED CONTROLS

1. Validate models before use, with testing proportionate to risk.
2. Review vendor evidence, test cases relevant to the intended use, and record limitations.
3. Include support, model changes, and ongoing review in vendor management.

5.4 WHAT GOOD LOOKS LIKE

The review combines vendor evidence with tests relevant to your institution, with depth matched to risk. If the vendor withholds details, your team records the gaps, tests outcomes, and considers stronger monitoring and contract protections. The approval explains whether the remaining risk is acceptable.

5.5 KEY SOURCES

Start with sources that fit your charter and the use being reviewed. For OCC-supervised community banks, OCC Bulletin 2025-26 clarifies model-risk expectations, including that annual model validation is not required. For federally insured credit unions, NCUA Letters 07-CU-13 and 01-CU-20 address third-party due diligence and oversight.

Scope of the 2026 model-risk guidance: SR 26-2, OCC Bulletin 2026-13 and FDIC FIL-15-2026 are expected to be most relevant to banking organizations with more than \$30 billion in total assets. The guidance generally does not apply to models at institutions with \$30 billion or less unless they have significant model risk. It excludes generative AI and agentic AI models. Smaller banks should use risk-management practices suited to their size, complexity and risk profile; this guidance is not a blanket validation requirement for every AI tool.

- Interagency Guidance on Third-Party Relationships: Risk Management (2023) [OCC / Federal Reserve / FDIC](#)
- NCUA AI resource page [NCUA](#)

Pending proposal, not final guidance: Proposed Third-Party Risk Management Guidance (OCC, Federal Reserve, FDIC and NCUA), published September 15, 2026. Comments close November 16, 2026. Existing applicable guidance remains in effect unless and until replaced. This proposal is included for awareness, not as a current requirement or the basis for the controls recommended here.

Source links are in Appendix A.

PART 2: EVERYDAY USE

6. Explaining an AI-assisted credit decision

6.1 SITUATION

A borrower receives a decline notice that doesn't explain what drove the decision. Your lending team needs to trace the decision and provide the required reasons, including when an AI model contributed to it.

6.2 RISK

Using AI doesn't change fair lending or notice obligations. A vague or inaccurate reason can leave the borrower without the explanation they are entitled to. Inputs that stand in for protected characteristics also need careful review.

6.3 RECOMMENDED CONTROLS

1. Test for unfair outcomes and for inputs that may stand in for protected characteristics.
2. Confirm that the reasons in the notice reflect the actual decision.
3. Meet applicable Equal Credit Opportunity Act (ECOA) and Fair Credit Reporting Act (FCRA) notice requirements and retain supporting records.

6.4 WHAT GOOD LOOKS LIKE

Your lending team can trace an AI-assisted decision to its supporting records. Testing examines unfair outcomes and potential proxies for protected characteristics. Adverse action notices give the specific principal reasons, applicable ECOA and FCRA notices go out on time, and records are retained.

6.5 KEY SOURCES

- Regulation B, 12 CFR 1002.9 (notifications) All
- Regulation B, 12 CFR 1002.12 (record retention) All
- Regulation B Official Interpretations (Supplement I) All
- CSBS AI Supervisory Framework V1.0

Source links are in Appendix A.

PART 2: EVERYDAY USE

7. Helping customers when the chatbot falls short

7.1 SITUATION

Your chatbot gives a customer the wrong information about a fee. The customer then has to find someone who can resolve it, often repeating the conversation. Staff need that history to take over.

7.2 RISK

Customers may rely on incorrect information from your chatbot. If reaching staff is difficult, an error can take longer to resolve and become a complaint.

7.3 RECOMMENDED CONTROLS

1. Check answers against approved rates, fees, and terms, and define where human review is required.
2. Require human approval before AI takes a consequential action.
3. Provide a clear path to staff, with the conversation history passed to them.

7.4 WHAT GOOD LOOKS LIKE

Customers can reach staff and challenge an AI-influenced decision. Staff receive the conversation history and check AI-generated information before relying on it. Written permissions define what an AI agent may do, with human approval required before consequential actions.

7.5 KEY SOURCES

- CFPB, Chatbots in Consumer Finance
- CSBS AI Supervisory Framework V1.0
- FTC Act Section 5 (unfair or deceptive practices) Jurisdiction-specific
- State and international requirements need a separate applicability review, including territorial scope and exemptions.

Source links are in Appendix A.

PART 2: EVERYDAY USE

8. Keeping track of AI after launch

8.1 SITUATION

A tool that passed testing begins making more mistakes. Staff correct them as they go, but nobody records the pattern. A change in the data or a vendor update may need attention beyond those individual fixes.

8.2 RISK

Performance can deteriorate while staff work around the errors. If no one knows when to pause the tool or how to keep the work moving without it, problems can continue longer than they should.

8.3 RECOMMENDED CONTROLS

1. Track performance and give staff a way to report errors and near misses.
2. Set review triggers and name someone with authority to pause the tool.
3. Test the fallback process before you need to pause or retire the system.

8.4 WHAT GOOD LOOKS LIKE

The owner reviews performance measures suited to the tool and a log of errors, near misses, incidents, and feedback. Written thresholds show when to investigate or pause it. Staff have practiced the fallback process, and there is a plan for retiring the tool when needed.

8.5 KEY SOURCES

Start with sources that fit your charter and the use being reviewed. For OCC-supervised community banks, OCC Bulletin 2025-26 clarifies model-risk expectations, including that annual model validation is not required. For federally insured credit unions, NCUA Letters 07-CU-13 and 01-CU-20 address third-party due diligence and oversight.

Scope of the 2026 model-risk guidance: SR 26-2, OCC Bulletin 2026-13 and FDIC FIL-15-2026 are expected to be most relevant to banking organizations with more than \$30 billion in total assets. The guidance generally does not apply to models at institutions with \$30 billion or less unless they have significant model risk. It excludes generative AI and agentic AI models. Smaller banks should use risk-management practices suited to their size, complexity and risk profile; this guidance is not a blanket validation requirement for every AI tool.

- CSBS AI Supervisory Framework V1.0
- FTC v. Rite Aid Corporation
- NIST AI 100-1 and AI 600-1

Pending proposal, not final guidance: Proposed Third-Party Risk Management Guidance (OCC, Federal Reserve, FDIC and NCUA), published September 15, 2026. Comments close November 16, 2026. Existing applicable guidance remains in effect unless and until replaced. This proposal is included for awareness, not as a current requirement or the basis for the controls recommended here.

Source links are in Appendix A.

PART 3: SECURITY AND COMMUNICATIONS

9. Updating your security plan for AI

9.1 SITUATION

A caller can use an AI-generated voice to impersonate an executive. Inside your institution, an AI assistant can make files with overly broad permissions easier to find. These are different risks, but both belong in your existing security planning.

9.2 RISK

A familiar voice can make a fraudulent request seem credible. Broad file permissions can expose sensitive information to staff who don't need it. If an incident occurs, the team also needs to know which reporting rules apply and what starts each clock.

9.3 RECOMMENDED CONTROLS

1. Verify unusual requests through a known contact, even when the voice sounds familiar.
2. Review file permissions before enabling an AI assistant, and use phishing-resistant sign-in protection.
3. Record each regulator's reporting requirements, including what starts the clock.

9.4 WHAT GOOD LOOKS LIKE

Your security assessment covers AI-enabled impersonation and data exposure. Staff practice verifying requests, file access is reviewed before AI assistants are enabled, and sign-in protection resists phishing. Technical controls address exploitable vulnerabilities and unsafe inputs. The incident plan records each applicable notice deadline and its trigger.

9.5 KEY SOURCES

- NYDFS Industry Letter: Cybersecurity Risks Arising from AI [NYDFS](#)
- NYDFS 23 NYCRR Part 500 [NYDFS](#)
- Computer-Security Incident Notification rule (12 CFR 53, 225 subpart N, 304 subpart C) [OCC, Fed, FDIC](#)
- Treasury, Managing AI-Specific Cybersecurity Risks in the Financial Services Sector
- NCUA cyber incident notification: 12 CFR 748.1(c).
- Bank service provider notification: 12 CFR 53.4, 225.303 and 304.24.

Credit unions: Under 12 CFR 748.1(c), a federally insured credit union must notify NCUA as soon as possible and no later than 72 hours after it reasonably believes it has experienced a reportable cyber incident, or after receiving a qualifying third-party notification, whichever is sooner. Do not wait for a formal determination if the reasonable-belief or third-party-notice trigger has already been met.

Bank service providers: A separate rule requires a covered bank service provider to notify each affected banking organization as soon as possible after determining that it has experienced a computer-security incident that has materially disrupted or degraded, or is reasonably likely to materially disrupt or degrade, covered services for four or more hours. The four-hour threshold describes the service disruption; it is not a four-hour notification allowance. See 12 CFR 53.4, 225.303 and 304.24.

State and customer notices: Assess applicable state requirements in addition to federal regulator-notification duties. Customer-notification obligations require a separate assessment under the applicable rules.

Source links are in Appendix A.

PART 3: SECURITY AND COMMUNICATIONS

10. Talking to customers about AI

10.1 SITUATION

A draft announcement describes AI-assisted decisions as faster or fairer. Your team needs evidence for those claims before publication, whether a person or an AI tool wrote them.

10.2 RISK

Customers reasonably expect the service to match its description. Unsupported claims or unchecked AI-written messages can mislead them about what the tool does and what they can rely on.

10.3 RECOMMENDED CONTROLS

1. Keep evidence for each external claim about what the AI does.
2. Review AI-drafted customer messages for accuracy before staff send them.
3. Explain limitations that affect what customers can expect.

10.4 WHAT GOOD LOOKS LIKE

Reviewers can point to evidence behind each public claim about AI. Staff check AI-drafted customer messages for accuracy before sending them. Advertising claims follow your existing compliance review, and the wording explains limitations that matter to customers.

10.5 KEY SOURCES

- FTC Operation AI Comply
- FTC Act Section 5 (unfair or deceptive practices) Jurisdiction-specific

Source links are in Appendix A.

About Upstate AI

Ben Nichols
Founder & Principal Consultant, Upstate AI

Ben Nichols is a professor at Syracuse University, where he teaches continuing education and graduate student courses in AI and Machine Learning. He previously co-founded and was COO of Directlink, a conversational AI company serving community financial institutions. He brought the product to market, designed the AI architecture, and led implementations across dozens of financial institutions. Additionally, Ben is the Founder and Principal Consultant of Upstate AI. His contributions span strategic leadership analysis with executives, implementation and governance playbooks with leaders, and implementation, training, and audit of AI with contributors.

Ways to work together

Interactive AI workshop A full day with your leadership team to examine vendor claims, assess possible uses, and develop a scored list of opportunities.	AI audit A review of your operations, governance, and vendors, with recommended priorities, estimated costs and benefits, and a plan your team can use independently.
Part-time AI leadership Ongoing help evaluating vendors, preparing board reports, setting up governance, and overseeing implementation.	AI Execution We manage your AI build from specification to launch, with a technical plan, vendor evaluation, and checks that the delivered system meets your requirements.

What this guide doesn't cover • Commercial and small-business credit under Regulation B. • BSA/AML and SAR decisions made with AI. • Data rights and use terms in vendor contracts beyond model access. • State law outside New York. • A legal opinion for your institution. Confirm with counsel.
